

The Proof of Sustainability Network Litepaper

OUR PROJECT

The Gaupa Network creates a new ecosystem where businesses can reduce their costs related to Supply Chains while communicating in a transparent manner to their clients.

By using tailor-made Supply Chain Management Tools for Small to Medium Enterprises, businesses can track their products all through the supply chain. In addition to being a cutting-edge tool backed by a decentralised blockchain, the tracking gives businesses custom marketing opportunities to showcase their efforts towards sustainability and quality.

The Gaupa Network is where sustainable businesses and consumers belong.

A NETWORK FOR AND BY YOU

As a Business

Joining the Network gives you access to all the tools created by the Gaupa Labs team, including Supply Chain Management (SCM), Enterprise Resource Planning (ERP) and Community Features.

The tools provided are adapted to each business to respond to its unique needs.

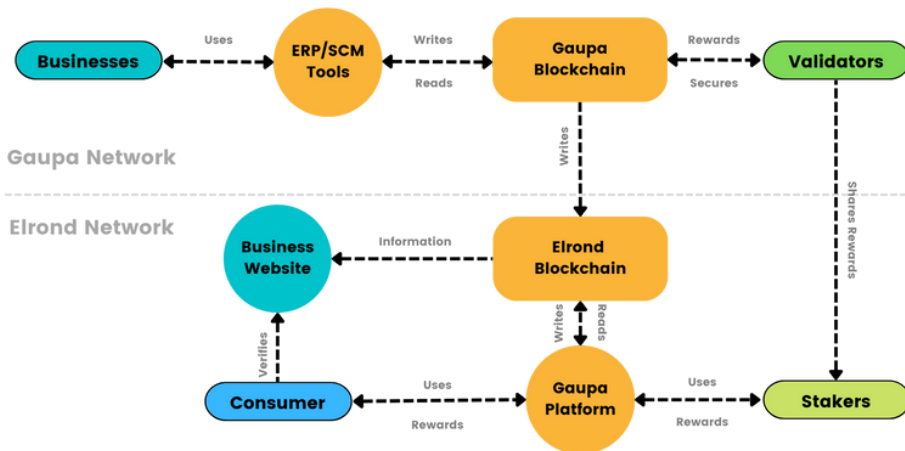

Built on top of a blockchain all data is encrypted and securely stored in a decentralised manner. Allowing you to stay in control of your data while using failsafe storage.

As a User

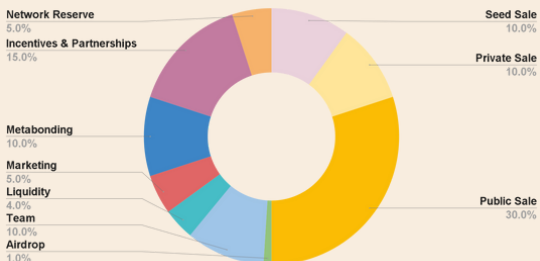

With a vision of a fully decentralised network, each user will play a key role in the Gaupa Network. Giving you the opportunity to secure the network through staking and joining a new community of both businesses and consumers while being rewarded.

A Decentralised Autonomous Organisation will be implemented giving each user a voice no matter their stake.

GAUPA ECOSYSTEM

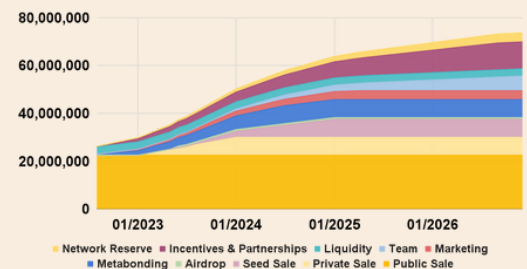

Gaupa Transparency Token

The GAUPA token serves as the native token of the Gaupa Network, giving governance and benefits to the holders.

With a vision to create a new platform between businesses and consumers, the GAUPA token allows users of the network to participate and get rewarded.

Empowering SMEs and users through a unique platform.
